

Energy:

Strengthening Manufacturing by Capitalizing on U.S. Energy Leadership

The U.S. is the world's leading energy producer, creating a major advantage for manufacturers in the global marketplace. Today, manufacturers benefit from all forms of energy—oil, natural gas, coal, nuclear and renewables—while making smart investments to become more energy efficient and keep protecting the environment. Meanwhile, manufacturers are developing new technologies that make energy more affordable, reliable and cleaner with each passing year.

Manufacturers are leading the way in finding innovative ways to harness U.S. energy, and the right federal policies can aid and advance that progress significantly.

Despite the progress the industry has made, it still faces many challenges. Historically, the federal government has been inconsistent in its support for diverse domestic energy development. Policymakers have not advanced a comprehensive plan that ensures an energy

future with continued certainty for manufacturers. In recent years, the federal government has also used regulations to favor or disfavor certain energy options. This year-by-year instability makes it difficult for manufacturers to make long-term investments and capitalize on the nation's energy advantage. The future of the manufacturing industry and our country's energy security rely on clarity and certainty from policymakers. With a renewed commitment to America's energy renaissance and a dedication to advancing new technologies that improve energy efficiency and support domestic energy production, the United States can continue to lead the world on energy for years to come.

“ The strength of manufacturing is in large part a result of the United States’ energy resources and innovative technologies that are unmatched by any other nation in the world. America’s energy advantage creates the ability—and lawmakers can create the conditions—for businesses to succeed, and manufacturers will continue doing our part to constantly diversify our energy portfolio.”

—Karl Glassman, Chairman and CEO,
Leggett & Platt, Incorporated

An Energy Agenda for the Future Must:

- Recognize that the U.S. is globally unique and has the potential to chart an energy future that benefits the entire nation, not just some regions.
- Ensure access to domestic and overseas markets so that fuels and technologies are developed here and marketed around the world.
- Prioritize technology and innovation to ensure manufacturers have access to reliable and affordable energy while the grid evolves, air quality improves and greenhouse gases are reduced.

Actions for Leaders to Take:

- ✓ Remove barriers that slow access and improvements to the variety of energy resources.
- ✓ Repair the broken permitting process for energy projects to minimize delays and reduce litigation.
- ✓ Provide access to federal lands for responsible energy exploration.
- ✓ Support measures to enhance the deployment of energy-efficient technologies in the public and private sectors.
- ✓ Expedite the legal and regulatory processes for exporting energy technologies.
- ✓ Provide for a reliable, modern electric grid that ensures manufacturers can access energy when they need it, even as policies and markets change.
